Complete Vehicle ID & Undercarriage Inspection System

Road Safety Solutions

Secur-ePark

Prowler

A powerful flashlight, high-resolution digital camera and wireless transceiver combined in a tough, ergonomic, lightweight casing that allows an operator to capture, compare and store with a single click!

Configured with IEG's automatic license plate recognition (ALPR) software, the Secur-e-Park Prowler becomes a fully featured, mobile ALPR with all the benefits of rapid scanning, comparisons and results in real time.

BombCam

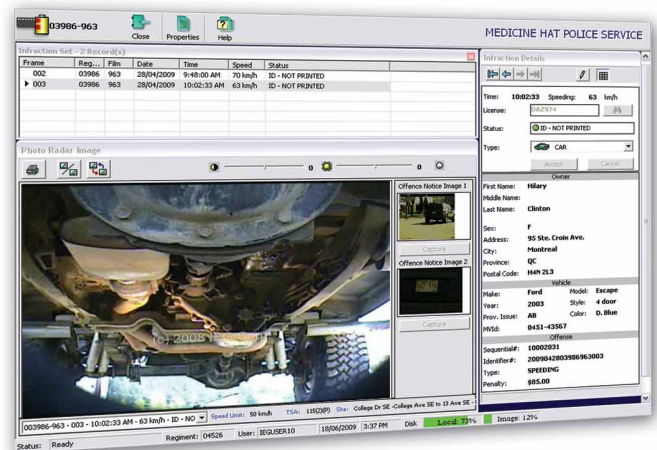

BombCam takes you from traditional security using hand held mirrors to a digital scanning process. Speeding and simplifying the critical inspection process, BombCam allows personnel to perform their functions remotely, thereby dramatically reducing risk.

Using a complement of digital video cameras installed in a rugged speed bump housing, BombCam can capture high quality video of vehicles in motion and store the sequence for detailed review.

EyeCam

Secur-e-Park EyeCam is an innovative vehicle monitoring solution embedded in a transportable speed bump design.

The system incorporates video cameras and IEG's ultra-high accuracy ALPR system (Automatic License Plate Recognition) into a rugged, yet transportable, speed bump enclosure.
